

The Metric Trails method establishes a reproducible and scientific framework for measuring and comparing trail courses. Each GNSS trajectory is carefully standardized: coordinates are sanitized, projected to a uniform reference system, and resampled at a fixed spatial resolution, and elevation is corrected using universal elevation sources. This process ensures that every certified course can be compared on equal geometric terms. In short, this report translates raw GNSS data into a scientifically comparable trail representation.

Metric	Std50m	Raw
ITRA Class	S	S
Km-effort	26	27
Distance (m)	17,502	18,183
Spatial Resolution (m)	50.2	2.3
Elevation Gain (m)	838	834
Elevation Loss (m)	-836	-855
Mean Abs. Slope (%)	9.2 %	10.2 %
Share of Pos. Slope (%)	52.3 %	60.9 %
