

The Metric Trails method establishes a reproducible and scientific framework for measuring and comparing trail courses. Each GNSS trajectory is carefully standardized: coordinates are sanitized, projected to a uniform reference system, and resampled at a fixed spatial resolution, and elevation is corrected using universal elevation sources. This process ensures that every certified course can be compared on equal geometric terms. In short, this report translates raw GNSS data into a scientifically comparable trail representation.

Metric	Std5m	Raw
ITRA Class	XS	XS
Km-effort	16	16
Distance (m)	10,157	10,311
Spatial Resolution (m)	5.0	2.2
Elevation Gain (m)	590	565
Elevation Loss (m)	-591	-565
Mean Abs. Slope (%)	11.6 %	12.4 %
Share of Pos. Slope (%)	51.7 %	47.5 %
