

The Metric Trails method establishes a reproducible and scientific framework for measuring and comparing trail courses. Each GNSS trajectory is carefully standardized: coordinates are sanitized, projected to a uniform reference system, and resampled at a fixed spatial resolution, and elevation is corrected using universal elevation sources. This process ensures that every certified course can be compared on equal geometric terms. In short, this report translates raw GNSS data into a scientifically comparable trail representation.

Metric	Std50m	Raw
ITRA Class	L	L
Km-effort	83	89
Distance (m)	43,930	47,759
Spatial Resolution (m)	48.7	3.2
Elevation Gain (m)	3,873	4,162
Elevation Loss (m)	-3,872	-4,161
Mean Abs. Slope (%)	17.7 %	17.8 %
Share of Pos. Slope (%)	52.8 %	50.7 %
