

The Metric Trails method establishes a reproducible and scientific framework for measuring and comparing trail courses. Each GNSS trajectory is carefully standardized: coordinates are sanitized, projected to a uniform reference system, and resampled at a fixed spatial resolution, and elevation is corrected using universal elevation sources. This process ensures that every certified course can be compared on equal geometric terms. In short, this report translates raw GNSS data into a scientifically comparable trail representation.

Metric	Std50m	Raw
ITRA Class	XS	XS
Km-effort	17	19
Distance (m)	12,055	12,437
Spatial Resolution (m)	49.7	27.7
Elevation Gain (m)	465	701
Elevation Loss (m)	-464	-700
Mean Abs. Slope (%)	7.7 %	11.9 %
Share of Pos. Slope (%)	51 %	53 %
